

# When Allergies Become a Problem

why AllergiDrops work better than shots

## ● Clinically Significant

Specific allergens targeted for single antigen therapy through shots or drops

## ● Clinically Insignificant

Allergens not considered severe enough to treat. However, when combined, these allergens can cause symptoms. AllergiDrops treats over 100 allergens all at once, regardless if they are considered significant or not!

## ● Cumulative Effect

Triggering symptoms for allergens NOT being treated with specific single allergens
