

Sick and tired of being sick and tired?

Start the AllergiDrop program today!!!!

Do you have allergies?

Many patients assume they have allergies because they have the symptoms, but have never been tested to identify what allergen, if any, may be causing the problem. All they know is that certain times of the year they get the typical allergy symptoms such as runny nose, watery eyes and congestion, but there are also lesser-known signs of allergies like chronic sinus infection, asthma, conjunctivitis, nasal polyps, chronic ear infections and migraine headaches. Even skin ailments like, hives and eczema are treated as chronic illnesses when they are allergic in nature. If you have any of these symptoms, ask your doctor about the AllergiProgram today.

The AllergiDrops Program

Step 1: Evaluation—After an exam, allergens may be identified through a blood and/or skin test.

Step 2: Your Treatment Plan—After reviewing your test results and your symptoms, your provider will determine if you are a good candidate for the AllergiDrops. If you are, he will start you on your first AllergiDrop dose at that time.

Step 3: First Follow up—Your provider may ask you to return for a follow up visit in 30 or 45 days to report how the therapy is going and review the progress on your dosing schedule.

Step 4: It's Now Up to You!—Follow the Daily Dosing Schedule, record the drops you take each day and check any symptoms you might be feeling. You will find a reduction of symptoms within a couple of weeks.

Step 5: Return Visits—Every three months, you will return to your doctor to monitor your progress and receive your AllergiDrop maintenance dose. Additional diagnostics may be performed to identify the effectiveness of the serum.

Join the AllergiDrops Program

If you or someone you know has allergies, you know how miserable allergies make you feel. An allergy is really just an over reaction by your immune system against a normally harmless substance. Over the counter and other allergy medication merely mask the symptoms you experience when your body reacts to allergy triggers.

AllergiDrops is a universal allergy serum that has been developed to be taken easily through daily drops under your tongue. AllergiDrops contain over 100 allergens in extremely small doses. By slowly introducing these allergens to your immune system, your body builds a tolerance to the allergens, virtually eliminating your allergies altogether. Talk with your doctor about AllergiDrops today.
